### Exercise. Adding multiple markers to map

Create an app, that displays a map that open at the user's location. User can add multiple markers to the map.

Requirements for the app are as follows.

- Map is displayed.
- User's location is retrieved, and map is opened at that location.
- User can add marker(s) by pressing map (longpress event), there is no need to provide title or other information, or save markers (e.g. AsyncStorage).

Documentation for MapView is available on <https://github.com/react-native-maps/react-native-maps>.
